eugen sandow is rightly considered the grand father of modern bodybuilding he was

also the first natural bodybuilder not having access to the pills powders and potions that modern bodybuilders favor of course sandow was blessed with great genes the book presents sandow s philosophy of physical training sandow s basic exercise method detailing his exercise program is the subject of another book it is interesting to learn sandow s concepts of exercise and diet and compare them with our so called modern views of the same this is eugen sandow s second book and his most popular one it was published in 1897 after his first trip to america and included a more fully developed explanation of his reliance on very light 5 pound dumbbells combined with maximum mental focus and projection directly into the muscle or muscles being tensed the following quotes contain the principles included in this book exercise in front of a mirror it is the brain that develops the muscle brain will do as much as the dumbbell even more when you are sitting down reading practice contracting your muscles do this everytime you are sittng down leisurely and by contracting them harder and harder each time you will find that it will have the same effect as the use of the dumbbells or any more vigorous form of exercise it is very advisable for all pupils to get in the habit of constantly practicing this muscle contraction it in itself is an admirable exercise but it is even more valuable owing to the fact that it improves the will power and helps to establish the connection between the brain and the muscles which is the basis of strength and condition for the beginner the most difficult part of my system is so fully to concentrate his mind on his muscles as to get them absolutely under control it will be found however that this control comes by degrees the brain sends the message the nerves receive it and pass it on to them with regard to the will power that is exerted it should be remembered that whilst the effect of weightlifting is to contract the muscles the same effect is created by contracting the muscles without the weight

classical scholarship has traditionally neglected the prominence of the body in antiquity. constructions of the classical body theorize that the study of antiquity is necessarily a study of the body and that attention to this fact can lead to a much needed shift in the way in which classical studies are approached today. this volume aims to reestablish the relevance of the problem of the body at the perimeters of several different kinds of inquiry and in this way to help open up a field of possibilities for future study. the range covered by the essays in this volume is sweeping from corinthian vaseware to athenian and roman politics, poetry from homer to ovid, medical writers from the hippocratic corpus to the diary of aelius aristides, second century c.e. philosophy, seneca, porphyry, the greek novel, christian apocrypha, ovid's medieval reception, and twentieth century film. this range is a consequence of the multidisciplinary nature that any study of the body requires and it attests to the particular richness of the body in classical antiquity and as an object for study today. the volume illustrates that the body is located between traditional borders, not within them. the body dissolves traditional objects of study and joins areas usually kept apart. retracing the fate of the body is thus a way of rendering antiquity truly strange again. it allows us to see the past afresh with open eyes. this volume includes essays by carlin a. barton, anne carlson, eric downing, catherine edwards, maud w. gleason, john henderson, ralph hexter, s. c. humphreys, helen king, leslie kurke, robert lamberton, david s. potter, amy richlin, giulia sissa, maria wyke, and froma i. zeitlin, along with an introduction by james i. porter. a superb collection, one that i know will be most welcome not only in the field of classical studies but in the libraries of all those interested in the history and historicity of the body. page dubois, university of california, san diego.

this title was first published in 2003. the contributing authors have sought to integrate a gender perspective into their respective fields without isolating it from

other theoretical accounts the chapters attempt to employ insights from feminist work and gender studies in general yet insist on criticizing monolithic accounts of masculinity and elaborating on more differentiated historically and socially embedded accounts of men's lives and their construction of masculinities the volume is the result of interdisciplinary workshops focusing on questions of male sexuality the male body and masculine representations primarily investigating the relationship between change and continuity within western patriarchal society and the theoretical rather than political implications of the new research in men and masculinities this volume differs from the first in that it deals with the construction of masculine identities on an individual level the individual man's relationship with his own body and sexuality
